[HYPRO LURMARK SPRAY TIPS]

LURMARK

POM 110°

From 2 to 4 bar (30-60 psi) - 110°
Herbicides and insecticides spraying.

POM 80°

From 2 to 4 bar (30-60 psi) - 80°
Herbicides and insecticides spraying.

LO-DRIFT 110°

From 2 to 4 bar (30-60 psi) - 110°
With pre-emergent herbicides and post-emergent systemic herbicides. Produces significantly less fine droplets than a standard flat fan.

DRIFTBETA 120°

From 2 to 6 bar (30-89 psi) - 120°
Ideal for broadleaved weed control, non-selective work and systemic fungicides (not recommended for applications of graminicides). Produces air-filled droplets, which cut drift dramatically for a safe spraying in all weather conditions.

ULD 120°

From 1 to 8 bar (15-115 psi) - 120°
With pre-emergence and early post-emergence herbicides, glyphosate applications to larger weeds and systemic fungicides applications. Creates large air-filled droplets and fewer fine droplets than standard flat fan nozzle.

GUARDIAN AIR™

From 1 to 6 bar (15-87 psi) - 120°
Cereal, oilseed rape and pea fungicides. Scientifically designed finer air-inclusion nozzles proven to deliver improved performance in the field. LERAP3 certification awarded for drift reduction at very low pressure.

HOLLOWTIP 80°

From 3 to 6 bar (40-63 psi) - 80°
Specially designed for the application of fungicides and insecticides. Can also be used as a band spray and with knapsacks. Produces finely atomised spray droplets ideal for ear targeting and good foliar coverage.

DEFLECTIP

From 1 to 5 bar (15-70 psi)
Banding applications of pre and post-emergent herbicides. Flood spray nozzle. Wide angle spray.

XT

From 2 to 5 bar (30-43 psi)
Precision moulded polyacetal tip in a machined stainless steel body. Boomless spray nozzle. Common uses includes orchard, vineyard, forestry, pasture, turf and golf course spraying. Large droplets size reduces spray drift and promotes spray penetration.
